Fixderma Trial Lab

See where a new product works best, before you launch it.

A quota-sampled consumer-use testing and regional wearability evaluation engine.

Problem: Small samples give very wide ranges

With 22 people, 22 of 22 saying yes means the true rate could be 85% to 100%.

In contrast, n = 142 provides a tight ±7% margin of error across climates with pre-locked endpoints.

The Idea: Study → Regions → Launch Order

Regional evidence guides distribution before national rollout.

1. Structured consumer panel across 3 climate zones.
2. Weekly blinded photo and wearability reviews.
3. Rule-based suggested launch order for dark stores and retail.

How a Study Runs: Five Static Phases

Transparent, standardized, DPDP-compliant workflow.

- Digital Consent under India DPDP Act
- Fresh kit arrives at participant residence
- Structured check-ins at weeks 0, 2, 4, 8
- Ongoing safety reaction logging
- Dermatologists score photos without participant details

Participants get a ₹500 voucher for completing every check-in, the same for everyone whatever they report.

Results by Region: The Engine

Live data progression across hot-humid, hot-dry, and temperate zones.

- Temperate: 89% comfortable (95% range: 77–95%)
- Hot-dry: 81% comfortable (95% range: 69–90%)
- Hot-humid: 67% comfortable (95% range: 53–79%)

Suggested launch order card rule: Non-overlapping ranges recommend launching in Temperate & Hot-dry first.

Honest Numbers: Shopper Preview

Clear, defensible product page evidence.

- Sample size: 142 enrolled, 118 completed
- Active comfort rate: 79% (95% range: 71–85%)
- Counting everyone who started: 65%
- Safety log: 0 serious reactions; 1 moderate reaction reported (participant stopped product)
- Zero efficacy claims; wearability and comfort only.

Beyond the Lab: The 90-Day Plan

Lifting dark-store availability from 69% to >95%.

- Days 1–30: Baseline platform vendor portals and fix core listing basics
- Days 31–60: Close dark-store gaps in Gurugram & Bengaluru; target ad spend
- Days 61–90: Scale replenishment SOP and align inventory to Trial Lab regional findings

Full details available in the Quick-Commerce Growth Audit PDF.

Next Step: A 90-Day Pilot on One Launch

Operationalize Trial Lab on a single hero SKU.

Run an end-to-end 90-day pilot on one upcoming formulation across 7 cities, validate wearability across climates, and execute the dark-store growth playbook.
